Empire	A group of nations or people under one ruler or government
Invasion	An act or instance of invading by an enemy or hostile army
Legacy	Something that is passed down from ancestors or people who came before

Where?

What?

The earliest Greeks came from the islands around Greece and started to settle on the mainland around 1200 BCE. The Ancient Greeks traded with different people around the Mediterranean. They set up colonies in new places.

City-states began to grow. Athens became a powerful city-state who traded and spread their ideas. Sparta was famous for its army. Corinth was the wealthiest of the city-states. Thebes was a powerful and respected city-state.

The Greeks invented the Olympics as a festival to honour Zeus. They developed the Phoenician alphabet which made writing more efficient and accurate. They sought to find the answers to problems rather than relying on praying to the gods.

The Greeks had some significant achievements, specifically related to science and mathematics, but they also built on the ideas of other cultures such as the Phoenicians and the Egyptians. The Romans were influenced and impressed by Greek achievements.

Alexander the Great took control of Greece and then went on to defeat the Persian Empire. He conquered many other places and his Macedonian Empire grew. This helped spread Greek, Egyptian and Persian ideas around Europe, Africa and Asia.

The Ancient Greeks and Romans were farmers and traders. Both societies were highly divided into social classes. Both were polytheistic. Both empires exported and traded goods. Greece was made up of city-states and Rome was a powerful single state.

Many of the words we use today derive from the Greek language. The architecture of many buildings is influenced by classical Greek design. The Greeks heavily influenced the development of theatre, philosophy, science and medicine.
