LI: I can measure the perimeter of 2D shapes.

In Maths this week, we are learning all about perimeter. Watch this video to help you understand what perimeter is <https://www.bbc.co.uk/bitesize/topics/zvmxsbk/articles/zsr4k7h>

To work out the perimeter, we have to measure the length of each side of the shape. If it's a square, we can just measure one side and times the number by 4 (because there are 4 sides in a square)

$$5 + 5 + 5 + 5 = 20\text{cm}$$

$$5 \times 4 = 20\text{cm}$$

If the shape is a rectangle, we can work out the length of two sides and times them by two:

$$3 \times 2 = 6\text{cm}$$

$$6 \times 2 = 12\text{cm}$$

$$6 + 12 = 18\text{cm perimeter}$$

Sometimes the shapes are measured in mm, cm or m. Make sure you always look at the units of measurement.
